

Advanced LED Diagnostics

the simplest ever!

System Sentinel – Standard On Commercial Gas Models

Our large volume gas commercials feature System Sentinel – the time saving exclusive LED information panel that allows you to quickly verify the system operation sequence.

-  **POWER:** This LED indicates that 120VAC power is being supplied, the On/Off switch is working and the 24VAC transformer is functioning properly.
-  **THERMOSTAT:** When illuminated this LED verifies that the thermostat is operating (calling for heat) and that 24VAC power is being supplied to the damper assembly.
-  **IGNITION:** When illuminated, this LED indicates that the damper assembly is opened, 24VAC power is being supplied to the ignition control module and that the ignition sequence has begun.
-  **PILOT VALVE:** This LED lights when the ignition control module is supplying 24VAC power to the energy cutoff device (ECO).
-  **ECO:** This LED lights to show that the ECO is closed and 24VAC power is being supplied to the pilot valve terminal on the gas control valve.
-  **MAIN VALVE:** This final LED indicates that the ignition control module is supplying 24VAC power to the main valve terminal on the gas control valve.

System Sentinel – Featured On All Commercial Electric Models

You can put away your amp meters, because with our exclusive System Sentinel diagnostics for our electric models, we've taken the guesswork out of trouble-shooting. It's simple! Glowing LED lights verify element operation and location. When it comes to easy maintenance, System Sentinel makes the difference – allowing you to make more efficient use of your time.

**If you think System Sentinel diagnostics makes your job easier, you're right.
If you think System Sentinel is unique, you're right again.
It's available only with Rheem-Ruud Commercial Water Heaters.
Our products are designed with you in mind.**
